

ABSTRACT OF THE DISCLOSURE

A shower rose includes a spraying unit, a mirror, a water transmitting unit and a water-flow controlling unit. The spraying unit has a first surface and a corresponding second surface. The water is sprayed from the first surface of the spraying unit. The
5 mirror is mounted on the second surface of the spraying unit. The water transmitting unit is connected with the spraying unit and the water transmitted from the water transmitting unit to the spraying unit. The water-flow controlling unit is mounted on the water transmitting unit and used to control the amount of the water sprayed out from the spraying unit.
